Task 1 Digital literacy report

For the digital literacy project, I used **Canva** to design an infographic titled "Digital Literacy Demystified". The design serves as a comprehensive guide for students to navigate the modern digital landscape with confidence.

Design Overview

The infographic is structured around the core definition of digital literacy: the ability to find, evaluate, create, and share content using information technologies while applying critical thinking. It visually organizes information into several key areas:

- **The Three Pillars**: It highlights critical thinking, technical fluency, and creative expression as the foundation of digital competence.
- **Practical Student Tools**: It categorizes software into functional groups like Organization (Zotero/Google), Creative Design (Canva), and Research.
- **Cybersecurity & Ethics**: It emphasizes safety through "Link Logic" and mandatory Multi-Factor Authentication (MFA).
- **Professionalism**: It provides actionable advice on LinkedIn optimization and proper email etiquette.
- **Reflection**
- One thing I found particularly **interesting** was the "Front Page Test" concept. It’s a simple yet powerful reminder to consider if you’d be comfortable with your digital content appearing on a news front page before posting. Balancing this ethical mindset with technical skills creates a truly well-rounded digital presence.
